

10 STUDIES ON THE BENEFITS OF MOLECULAR HYDROGEN FOR HEALTH

There have been over a thousand human studies on 170 different disease models. These studies go back over 50 years. These studies have been double blinded, peer reviewed, published and have shown positive effects. Below is a sample of 10 studies on the benefits that molecular hydrogen has for overall health & wellness.

CANCER STUDY

Molecular hydrogen has been proven to be anti-inflammatory and may help to prevent the growth of cancerous tumors. There is an entire multitude of studies pointing to the anti-inflammatory benefits of molecular hydrogen. [This one](#) in particular notes that because hydrogen is the smallest bio-available molecule its antioxidant power is far more effective than other forms of antioxidants. Furthermore, your body can absorb large amounts of

molecular hydrogen without any negative side effects. This means molecular hydrogen is an excellent resource both for those looking to increase their antioxidant intake, and also has been noted as a potential treatment in the future for those with cancer.

DIABETES STUDY

Hydrogen-rich water has been proven multiple times to ease the effects of type 2 diabetes. [One study](#) in particular shows that hydrogen-rich water relieves the oxidative stress that often comes along with diseases such as diabetes, which has a lowering effect on glucose in the blood and helps to prevent body sugar resistance. This is a huge benefit to those suffering from type 2 diabetes and are trying to manage their disease symptoms with just medication.

PARKINSON'S STUDY

Parkinson's disease results in many losing cognitive abilities and some form of bodily controls.. Parkinson's is often made worse due to oxidative stress- This stress may be relieved by taking regular doses of molecular hydrogen. [One study](#) in Japan found molecular hydrogen to have huge benefits in patients with Parkinson's Disease. This study has been found to have the potential to reduce symptoms in those with Parkinson's, and secondly, it may also reduce the chance that the Parkinson's will develop or get worse over time.

BRAIN STUDY

Many people who consume hydrogen rich water find improved focus, mental clarity and information recall. Molecular hydrogen has also been found to alleviate the symptoms of many mental disorders, such as anxiety and depression.

In addition, there have been studies on the effects of molecular hydrogen on stroke victims, brain injuries and neuroprotective benefits. Here is [one example](#) of molecular hydrogen showing significant increases in mental wellbeing.

EYES & EARS STUDY

Eyes and ears might seem sort of secondary in comparison to the other diseases and issues discussed in this article, but it's important to remember that having healthy eyes and ears hugely contributes to your quality of life! [Studies](#) have shown that taking regular doses of hydrogen-rich water can potentially prevent hearing loss, and can also decrease the effects of [age on your eyesight](#). Studies have shown improvements in macular degeneration

METABOLIC SYNDROME STUDY

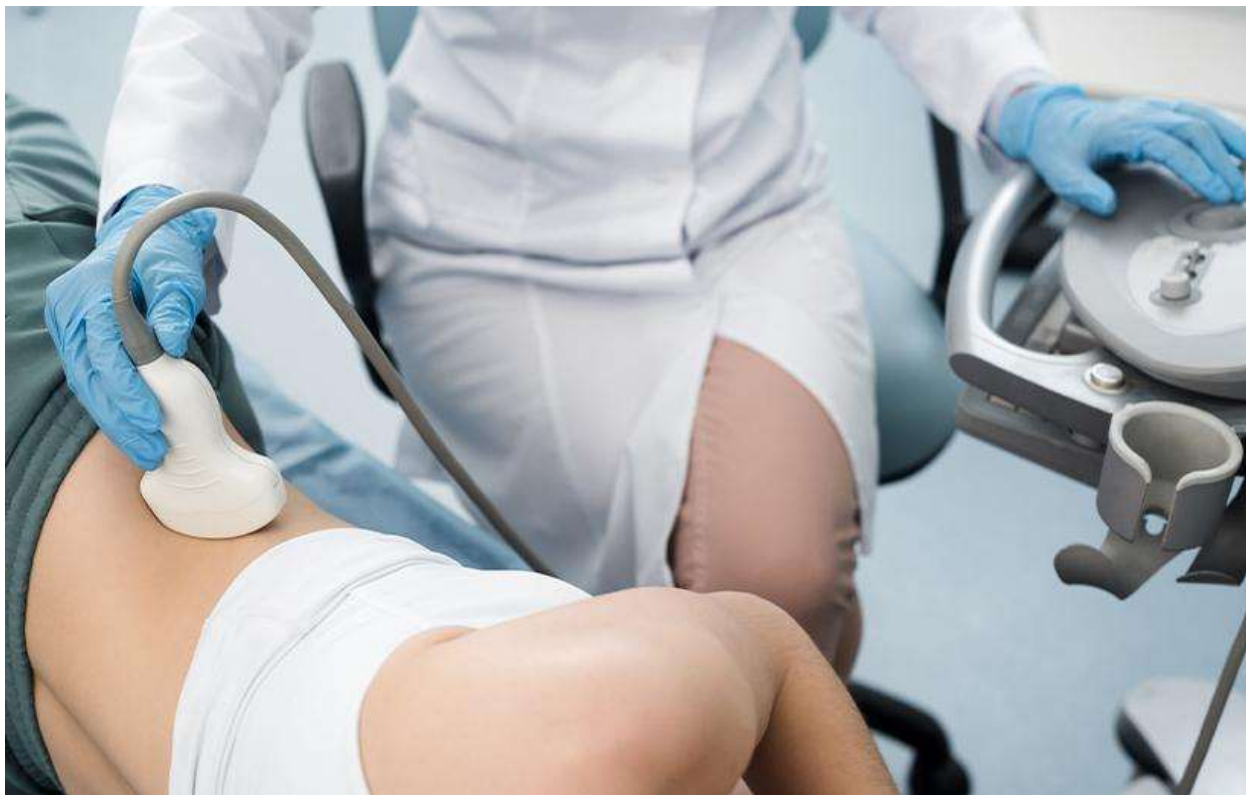

Metabolic syndrome is an umbrella term relating to conditions that put you at a higher risk of having a stroke, heart attack, or developing type 2 diabetes. The conditions are generally things such as high blood pressure and high blood sugar. Molecular hydrogen has been [proven to help people lose weight](#), which is one area that predisposes people to have heart disease and strokes, as it slows the body's uptake of fatty acids. It has also [been noted](#) to protect men with forms of metabolic syndrome from developing erectile dysfunction, which is something that often comes along with the development of these syndromes.

HEART DISEASE STUDY

Heart disease is now the [number one killer](#) of people in the United States. It is now common knowledge to reduce your risk of heart disease is recommended to improve diet, manage stress and incorporate regular exercise into your lifestyle routines. In addition, regular consumption of molecular hydrogen can also enhance preventative measure. [Once again](#), the anti-inflammatory effects of hydrogen-rich water have been cited as reducing inflammation in the cardiovascular system, helping to protect an individual from metabolic syndrome and diseases such as Heart Disease.

KIDNEY STUDY

Molecular hydrogen has been noted for its [potential protective benefits](#) for the kidneys, helping to reduce the impact of toxins. When the kidneys are less burdened by toxins, they can function more efficiently. Supporting proper kidney function may help reduce the risk of kidney-related issues, including kidney disease and kidney stones.

LIVER STUDY

It is uncommon to find someone without at least some degree of liver stress, as alcohol consumption can contribute to cumulative effects on the liver over time. Molecular hydrogen has shown potential in [supporting individuals](#) with fatty liver conditions by helping to reduce oxidative stress. It may also be beneficial during [recovery from liver strain or injury](#), as it can support the body's natural healing processes and help protect liver cells from further damage.

SKIN & RADIATION STUDY

Molecular hydrogen has been shown to offer potential benefits for individuals with certain skin conditions. [One study](#) suggests that both drinking and bathing in hydrogen-rich water may help alleviate symptoms of psoriasis. Other research indicates it may help [reduce the effects of internal radiation exposure](#), as observed in studies involving individuals affected by the Fukushima incident in Japan.
